

## Become an online data backup reseller

Your client's data is the life blood of their business. Constantly updated, renewed and revised, it can make the difference between success or failure. Secure offsite online data backup is a fundamental requirement as part of a comprehensive disaster recovery plan. Online offsite computer and server backup has many practical advantages over the more conventional backup methods CD or DVD, Zip drive, tape or external hard disk.

### Another product to offer

Would you like to offer online data backup to your clients?

Gigasoft can offer you a complete hosted backup solution whereby we offer you a re-supplier backup account at discount, allowing you to convert your client base over to secure online backup with the minimum of effort, just by installing the client software onto your customer's servers/pc.

### No setup fee

No initial outlay or hardware acquisition required enabling you to effortlessly bring on line a steady additional income stream within a month of setup.

Gigasoft works with a number of business partners and each relationship is tailored uniquely to support the individual sales process, implementation and servicing of the solution according to either parties preferences.

For large & smaller users, our Gigasoft online backup service provides a low cost solution that is easy to set up and manage, ultra resilient, absolutely secure and infinitely scalable.

Gigasoft has created a series of tiered online backup and recovery solutions that keep data safe permanently.

**Keep your clients data safe. Keep it online.**

#### About Gigasoft Data Backup

Based in Bishops Stortford, Gigasoft is a specialist in online backup and recovery solutions. We have the capability, knowledge and expertise to configure and install a scalable solution for home users, companies, enterprises and organisations. For large & smaller users, our Gigasoft online backup service provides a low cost solution that is easy to set up and manage, ultra resilient, absolutely secure and infinitely scalable. [Gigasoft](#) has created a series of tiered online backup and recovery solutions that keep data safe permanently.

#### Background Backup

For home users, small businesses and enterprises alike, our solutions backup data automatically, working silently and efficiently in the background. At times preset by you, which can be every ten minutes, every hour, every day or every week, the backed up data is then transferred online to offsite locations.

#### Data Centres and Rapid Retrieval

These secure data centres store your data on mirrored redundant storage arrays and the easy to use software allows for rapid retrieval in the event of data loss.

#### Absolute Reliability

So you can be sure that you gain a solution that, while simple to implement, is absolutely reliable. From the initial installation and configuration through to the daily monitoring of backups, ongoing technical support and onsite assisted restoration in the event of a disaster, Gigasoft are there for you every step of the way.
