

COMPANY NEWS

25 March 2010

Gigasoft Data Protection Limited, Hertfordshire, one of the U.K.'s leading Data Back-up Companies, today announced that it has received ISO 27001 registration from IMSM Ltd.

Adopted by the International Organization for Standardization in Geneva, Switzerland, the ISO 27001 information security system was developed in order to establish an international standard of quality and proved to be one of the most rigorous international standards for system and physical security processes. For Gigasoft to be registered, the company passed a rigorous assessment focused on every aspect of their business, including physical infrastructure, site security and access management, personnel capabilities, communications and operations and back-up recovery systems.

Stefan Schenkelberg, left on the picture, presents the certificate to Andy Lister, Managing Director @ Gigasoft

"We looked for a consultant with experience in the information security industry. This is where Stefan Schenkelberg and his team from International Management Systems Marketing Limited (IMSM) came in. Stefan arranged for Paddy Minnis, IRCA, Chief Assessor (IRCA: International Register of Certified Auditors) for IMSM, to come in. Paddy paid frequent visits to Gigasoft, putting together the various policies and procedures which make up the ISO certification requirements. This major accomplishment reaffirms Gigasoft's commitment to demonstrating the highest competency in information security management. "This is assurance for our clients' that the confidentiality of their information is secure in accordance with an

internationally recognised standard," states Andy Lister, Managing Director of Gigasoft. "

Gigasoft Data Protection Ltd. began the registration process in December 2009 and completed in early March 2010.

IMSM performed an on-site assessment, examination of documented procedures and a survey of the company's overall operations. To determine continued compliance with ISO 27001, QAS will periodically conduct routine surveillance audits of Gigasoft operations. ISO 27001 is the only auditable international standard which defines the requirements for an Information Security Management System
