

Cloud Cuckoo Land

Why is data backup and data storage going so cheep cheep in the cloud?

Ask some of these questions and you'll find out why

Where is your data going to be physically stored? India, Guatemala, Iceland, the US?

If your data is abroad what data laws/regulations apply?

Have you heard of the Patriot Act? If not, you need to know if your data is stored in the US.

If your data is not in the UK how quickly can you get it back in the event of a disaster?

Are the data centres in the UK and are they ISO27001 data security accredited?

Does the company have a support telephone number you can ring?

Can they offer bulk data restore or bulk data seeding?

Is your data being replicated? Probably not.

Gigasoft has two physical UK data centres, **you know where your data is.**

The Gigasoft data centres' have been heavily scrutinised and awarded the prestigious **ISO27001** accreditation, **you know your data is secure.**

Your data is in the UK and Gigasoft promises should the worst happen we will get all of your data **back in 24hrs.**

Your data is protected by the **UK and EU data protection laws.**

Gigasoft has a dedicated **24/7 UK support telephone** number that you can ring and actually speak to a human being.

Bulk data seeding and bulk restoration come as a standard part of the Gigasoft **disaster recovery service.**

Gigasoft replicates all of its clients data to our second data centre. **If we go pop our service doesn't drop.**

Gigasoft is a **DISASTER RECOVERY SERVICE** not Cloud Cuckoo Land.

You get what you pay for....
